

Enterprise Challenges of Test Data

A Free RBCS Webinar: 1.5 PDU Credits

If you are testing a simple mobile app, you may find it relatively easy to find representative test data. However, what if you are testing enterprise scale applications? In the enterprise data center, one hundred or more applications of various sizes, complexity, and criticality co-exist, operating on various data repositories, in some cases shared data repositories. In some cases, disparate data repositories hold related data, and the ability to test integration across applications that access these data sets is critical. In this webinar, Rex Black will talk about the challenges facing his clients as they deal with these testing problems. You'll go away with a better understanding of the nature of the challenges, as well as ideas on how to handle them, grounded in lessons Rex has learned in over 30 years of software engineering and testing.

Please note the date change from March 14 to May 16.
