

Virtual Foundation Business Analyst Course Outline

General Description

We all know that the validity and accuracy of the requirements can make or break a project, yet often insufficient time and effort is devoted to this critical part of the software development life cycle. This course explores not just why the requirements matter, but how to gather the right requirements, document them effectively and ensure that they are properly implemented. It explores the roles of the requirements engineer and business analyst both in ferreting out the requirements and interacting with the project team to ensure the customer gets the product they want and need. In this course you will learn effective techniques to select the right people from whom you will elicit the requirements. You will learn to document and track these requirements so nothing gets missed. You will learn which team members you must interact with at which stage in the project, and you will learn to track the requirements to completion. Rather than looking at the requirements gathering as the first step in the lifecycle, we look at the requirements throughout the lifecycle as a driving force to implementing the best product possible.

This course has been accredited by the American Software Testing Qualification Board (ASTQB) (February 2017). This course is based on the IIBA (International Institute of Business Analysts), IREB (International Requirements Engineering Board) bodies of knowledge as well as the syllabus for IQBBA (International Qualification Board for Business Analysts) Certified Foundation Level Business Analyst certification (CFLBA). This course is an excellent preparation course for the IQBBA, IIBA, and IREB certification exams. In three days we will teach you to be effective in your tasks, how to work within the development methodology that has been implemented, and how to save your team time and money.

Learning Objectives

Through presentation, discussion, and hands-on exercises, attendees shall:

- Know reasons why requirements engineering/business analysis is important, yet often neglected (K1)
- Know roles of the requirements engineer/business analyst (K1)
- Understand the impact and causes of poor requirements (K2)
- Understand basic glossary terms (K2)
- Apply good requirements engineering to avoid project and product problems (K3)
- Extract the tasks from the requirements engineer/business analyst job description (K3)
- Know the legal aspects of working with contracts, suppliers and customers (K1)
- Understand that the type of product and application domain influence the approach that should be taken (K2)
- Understand that project conditions can strongly affect the success of the planned approach (K2)
- Understand that the environment is frequently changing and adaptation is a must (K2)
- Understand the social and human interaction factors that are required for success (K2)
- Identify missing success factors (K3)
- Estimate risk (K3)
- Understand the mechanisms and fundamental psychology of effective communication and the skills required for success (K2)
- Know the risks of inadequately determining the scope, context and interfaces of a system (K1)
- Understand the meaning of scope, context and interface (K2)
- Apply techniques to specify the logical and physical system boundaries using suitable techniques (K3)
- Know that requirements exist in many forms and must be consolidated into a coherent whole (K1)
- Understand the differences between functional and non-functional requirements and the acceptance criteria for each (K2)
- Understand the methods to use to define the behavior of the system (K2)

- Identify and model the processes of a system using a variety of tools and techniques (K3)
- Understand how to identify and structure large quantities of terms (K2)
- Apply graphical forms such as entity relationship diagrams (K3)
- Know classification schemes for non-functional requirements (K1)
- Understand categories of non-functional requirements, where to find these requirements and the importance of assigning acceptance criteria to each (K2)
- Understand interface requirements may change over time (K2)
- Know the pertinent IEEE documents and their main content (K1)
- Understand the needs of the individual stakeholders regarding the documentation they receive (K2)
- Understand the standard content of a requirements document (K2)
- Understand effective terminology to use in requirements and for acceptance criteria (K2)
- Rephrase a section of a requirements document so that it meets the required characteristics and complies to guidelines (K3)
- Know the requirements-applicable terms in the IEEE Glossary of Standard Software Engineering Terms (K1)
- Understand the importance of effectively using project glossaries (K2)
- Know which notation systems are most suitable for achieving various objectives at a specified level of detail (K1)
- Know that all sources must be identified and requirements solicited (K1)
- Understand the different sources and how to access information from these sources (K2)
- Understand the best elicitation techniques to use (K2)
- Understand how to validate quality characteristics (K2)
- Understand how to conduct an effective review session (K2)
- Apply checklists to find errors in requirements (K3)
- Understand the importance of each requirement being uniquely identified, prioritized and assigned the appropriate attributes (K2)
- Know the importance of creating views of the requirements (K1)

- Understand the different stakeholder views and the content of those views (K2)
- Understand the importance and application of traceability to a set of requirements (K2)
- Apply traceability (K3)
- Understand the importance of versioning and creating releases of requirements (K2)
- Understand the role of change management and the activities of a change control board (K2)
- Know the categories of tools that a requirements engineer/business analyst uses (K1)
- Understand the application of tools to the phases of requirements gathering and documentation (K2)
- Assess the benefits of various tools (K3)
- Know the outlook for the industry and the adaptation required for various domains and stakeholders (K1)

Course Materials

This course includes the following materials:

<i>Name</i>	<i>Description</i>
Course Outline	A general description of the course along with learning objectives, course materials and an outline of the course topics, including approximate timings for each section.
Noteset	A set of approximately 660 PowerPoint slides covering the topics to be addressed.
IREB Foundation Syllabus	“Certified Professional for Requirements Engineering Syllabus”
IREB Glossary	A glossary of Requirements Engineering Terms
*IIBA Body of Knowledge	“Guide to the Business Analysis Body of Knowledge”
*IQBBA CFLBA syllabus	“International Qualification Board for Business Analysis Qualifications Board Certified Foundation Level Business Analyst Syllabus”

<i>Name</i>	<i>Description</i>
Project Source Documents for Course Exercises	Specifications used in the realistic example project used in exercises for the course.
Exercise Solutions	A set of approximately 60 pages of detailed solutions for all exercises in the course.
Sample Exam Questions	Over 190 sample questions including a mock exam.
Information for those pursuing Certification	Tips and advice on how to prepare for the exam.
Detailed Outline Mapping to IREB, IIBA and IQBBA	Traceability matrix that cross-references the course sections to the IREB, IIBA and IQBBA syllabi.

*Available online.

The course materials are provided as watermarked copyright protected electronic downloadable files. If requested and purchased separately a hard copy of the course materials can be provided.

Session Plan

The virtual course runs for four days. Each day offers 4 hours of instruction with an additional 30 minute break. The classes run from 12:00 pm to 4:30 pm Central time.

1.0 Defining the Job

- 1.1 Do good requirements matter?
- 1.2 Purpose of defining a body of knowledge
- 1.3 Basic terminology
- 1.4 Business analyst or requirements engineer
- 1.5 Required skills

2.0 Categorizing Requirements

- 2.1 - Functional requirements
- 2.2 - Behavioral requirements
- 2.3 - Data and information requirements
- 2.4 - Non-functional requirements

2.5 - Interface requirements

3.0 Enterprise Analysis

3.1 - Determining the scope

3.2 - Understanding who does what

3.3 - Defining and planning the project

3.4 - Managing requirements risk

3.5 - Estimating

3.6 - Managing scope

4.0 Eliciting Requirements

4.1 - Identifying the sources

4.2 - Finding the stakeholders

4.3 - Applying elicitation techniques

5.0 Analyzing the Requirements

5.1 - Creating the business domain model

5.2 - Analyzing what you elicited

5.3 - Determining assumptions and constraints

5.4 - Innovating and improving

6.0 Documenting Requirements

6.1 - Preparing the glossary

6.2 - Getting ready to document

6.3 - IEEE guidelines

6.4 - Assigning attributes

7.0 Modeling Techniques

7.1 - Introduction to models

7.2 - Data and static behavioral models

7.3 - Process and flow models

7.4 - Usage models

8.0 Conducting Reviews and Gaining Approval

8.1 - Preparing the requirements package

8.2 - Checking quality

8.3 - Validating and verifying through reviews

8.4 - Obtaining approvals

9.0 Implementing and Maintaining

9.1 - Tracking traceability

9.2 - Managing changes

9.3 - Selecting the solution

10.0 Tools
