

Free Webinar: White-Box Coverage and Automotive Testing

A Free RBCS Webinar

Automobiles can have millions of lines of code in them, and some of that code can have safety-critical implications. Various standards apply to safety-critical automotive code, dictating the level of code coverage required: statement, decision (or branch), or modified condition/decision coverage. To celebrate the launch of our new Automotive Software Testing course, we're offering this free webinar. If you build or test automotive software, attend to get a taste of what you could learn in this course.

In this free RBCS webinar, join Rex Black, President of RBCS, as he describes in detail what each of these levels of coverage means, how you can achieve it, and how to understand what code coverage tools are telling you.

Please note the new date and time for this webinar.

[Register now](#) for May 26, 2020 from 3:30 PM – 4:00 PM CDT

Seating is limited.
