

## Quality and AI-based Systems

A Free RBCS Webinar

In this month's webinar, we are happy to welcome guest speaker, Adam Leon Smith. Adam is CTO of Dragonfly and is focused on testing, quality and AI. With two decades experience in environments, development, testing, quality and project delivery in addition to commercial experience, he is the chair of the British Computer Society's Special Interest Group in software testing, and works with international standardization committees developing AI and quality-related standards.

AI is a complex topic and is the biggest technical renaissance to impact testing for at least two decades. Adam will talk about intrinsic quality issues with AI, challenges in testing AI-based systems, and new techniques and methods. In addition, he will cover emerging AI-enhanced testing tools that are yet to get much coverage.

[Register now](#) for July 20, 2020, 1:00 PM – 1:30 PM CDT  
Seating is limited.

**Please note new date for this webinar.**
